

How Elqar Works

Why it's worth adopting, and how your team actually uses it day to day.

BUILT FOR RESTAURANTS · HOTELS · BARS · CAFÉS · CATERING · CLINICS

• 10-minute setup • 4 role levels • Unlimited locations on Pro • No credit card to start

Part 1 — Why Elqar

Spreadsheets and paper counts don't catch waste until it's already happened.

SPREADSHEETS & PAPER

Stock-outs found after the fact
No record of who changed what
Reorder points in someone's head
One typo from a wrong count

WITH ELQAR

Alerts fire at the threshold
Every movement logged, with timestamp
Par levels tracked automatically
One source of truth, every location

- 1 Real-time inventory**
Every item, every location, live quantity on every stock movement.
- 2 Purchase orders**
Create, send, and receive — inventory updates automatically.
- 3 Reports & analytics**
Stock value, food cost %, wastage trends, reorder alerts.
- 4 Role-based access**
Owner, Admin, Manager, Staff — granular permissions.
- 5 Full audit trail**
Every movement logged with who, when, and how much.
- 6 Instant alerts**
Low stock and out-of-stock alerts the moment a threshold is crossed.
- 7 Recipe costing**
Real-time food cost % and margin per dish as ingredient prices change.
- 8 Requisitions & handovers**
Cross-department stock requests and shift handover notes.
- 9 CSV import**
Already tracking inventory in a spreadsheet? Import it directly.

Also included:

Pricing

Free
\$0 forever
1 location, 3 users, 50 items

Pro
\$49/month
5 locations, 20 users, unlimited items

Enterprise
Custom
Unlimited everything, SSO

Part 2 — How Staff Use It

Day-to-day, for anyone recording stock movements or checking inventory.

- 1 Sign in**
One login per person. Role decides what you can see and do.
- 2 Check inventory**
Search or browse by location. Status badges show what needs attention.
- 3 Record a movement**
Receiving, issuing, transferring, or logging wastage — one form.
- 4 Receive a purchase order**
Mark what arrived against what was ordered, including partials.
- 5 Respond to alerts**
See what's low or out, acknowledge, and reorder directly.
- 6 Find anything fast**
Search jumps to any item, supplier, or purchase order.

Part 3 — How Owners Set It Up

One-time setup, usually under 10 minutes.

- 1 Add your locations**
Kitchens, bars, storerooms, warehouses.
- 2 Invite your team**
Assign roles per person.
- 3 Add suppliers**
One place for contacts and purchase order details.
- 4 Set par levels**
Define reorder points once; Elqar flags when you're below them.
- 5 Add your branding**
Logo and slogan show up when your team signs in.

Built With Security In Mind

Strict data isolation

Every query is scoped to your organization. No cross-tenant access, by design.

Role-based permissions

Staff can log stock without ever touching billing, team, or settings.

Hosted on Supabase infrastructure, EU region.

Full audit logging

Every stock movement, order, and change is recorded with who, what, and when.

Your data, exportable anytime

Download a full export from Settings whenever you want, no lock-in.

Frequently Asked Questions

Do I need training to use this?

No. Staff mainly need to record a movement or check a status badge — both take a couple of taps.

I already track inventory in a spreadsheet — can I bring that data in?

Yes. Settings ' Data has a CSV import that maps your existing items straight into Elqar.

Does it work on a phone?

Yes, the whole app is responsive and works in any mobile browser — no app install required.

What happens if I outgrow the Free plan?

Upgrade to Pro any time — your data carries over, nothing is lost or needs re-entering.

Can different staff see different things?

Yes. Each role sees only what's relevant to them — a line cook doesn't see billing, for example.

Can I cancel anytime?

Yes, no lock-in contract. Cancel from Settings ' Billing whenever you like.

What if someone forgets their password?

Self-serve reset from the login page — no need to wait on an admin to unlock the account.
